Freshney, R.I. (2005) Culture of animal cells: a basic technique manual. Wiley-Liss: Hoboken, NJ, USA. ISBN 92-7804714532 Full text not available from enlighten. The most complete resource on the techniques, equipment, principles and practices of the culture of animal cells from the publication of the previous edition of this reference text, numerous innovative progress occurred in the search for stem cells, cloning, tissue engineering and tests of in vitro toxicity. These and other developments have been incorporated into this fifth completely revised and enlarged edition of the culture of animal cells. Furthermore, to respond to the needs of the exponential increase in new arrivals for cell culture, in particular in the biopharmaceutical industry, a completely new chapter was introduced on training in cell culture technology. The most complete resource on the techniques, equipment, principles and practices of the culture of animal cells, this text offers a complete background relating to the growth of animal cells in culture. Starting from laboratory, safety, validation and bioethics design, continuing with the preparation of media, primary culture and cell lines, through characterization and authentication, contamination, specialized techniques and problems resolution, the coverage includes: \* A new section of training exercises, separated in basic, intermediate and advanced procedures, interconnected to the relevant protocols \* new coverage of stem cells, bioethics, validation, cloning, cellular signaling, in vitro toxicity test and fabric engineering \* one expanded section of full-color atlases, with primary culture images, cell lines, subculture, differentiation, cancer cells and transformation, three-dimensional culture, and specialized equipment \* improvement of the treatment of resolution of problems, with full crossed reference to the related protocols and text sections \* completely updated references \* the most clear, most part Presentation of Passo-Passo protocols available \* Numerous diagrams, photographs, tables and graphics \* detailed and updated information on the preparation of the reagent and the supply of materials and equipment, including a completely updated list of suppliers and other resources with web indispensable sites for researchers And clinical and biopharmaceutical scientists, students, trainees and technicians, this reference text presents the most accessible and complete introduction available for the cultivation and experimental manipulation of animal cells. Showing 1-30, your revision of the culture of animal cells starts: a basic technique manual May 22, 2013 Scientia has assessed, an extremely well-elaborate book was surprising on cellular crop procedures, deals with all aspects on this Topic, even if I couldn't find much on the cells I am working on, is still a brilliantly written book. So many suggestions and well-guided procedures. It is the oldest and most commonly used human cell line. The line is named after and derived from cervical cancer cells taken on February 8, 1951, from Henrietta Lacks, a 31-year-old African-American mother of five, who died of cancer on October 4, 1951.
